Information Services International-Dentsu, Ltd.

ISID Launching Full-Scale Provision of UiPath RPA Tool Supporting Japanese Company Workstyle Reforms Based on Experience with Large-Scale Introduction at Dentsu Inc.

Information Services International-Dentsu, Ltd. (Head office: Minato-ku, Tokyo; President and CEO: Setsuo Kamai; “ISID”) announced the full-scale launch of Robotic Process Automation (RPA) software “UiPath” for Japanese companies based on a business alliance with UiPath Co., Ltd. (Head office: Chiyoda-ku, Tokyo; President and CEO: Koichi Hasegawa), the Japanese arm of UiPath, which is headquartered in the United States.

ISID provides IT support for the working environment reform efforts of parent company Dentsu Inc., with the RPA introduction project representing a critical component of these efforts. Since its launch in April 2017, we have supported all processes, from business analysis, to development and introduction based on development standards, infrastructure architecture and operational establishment. At Dentsu, the introduction of UiPath is expected to automate about 400 processes by the end of 2017 and has already resulted in freeing up more than 10,000 hours of worktime per month.

Leveraging experience gained during this project, ISID is engaged in full-scale business development in the RPA domain to contribute to the resolution of a wide range of company issues faced by ISID and Dentsu Group clients, as well as to expand the alliance with UiPath and strengthen sales and support systems. We have already begun introducing this service to multiple leading companies in the manufacturing and other industries.

For many companies, operational efficiency aimed at realizing workstyle innovations is becoming an urgent management issue. As a means of resolving this issue, RPA, which automates business processes using robot technologies, is attracting a significant amount of attention. Specialized knowledge of both IT and business, such as the accurate selection and analysis of target businesses, the development of robots based on appropriate standardization and the construction of a sustainable operational structure is essential for the effective introduction of RPA. At present, there is not yet a sufficient knowledge base nor the specialized human resources necessary for meeting rising demands in the Japanese market.

With strengths in specialized business expertise and system construction capabilities, ISID has a track record of providing a variety of solutions supporting business innovation at a wide range of client companies in the financial, manufacturing and other industries. Combining these solutions with knowledge of advanced large-scale case studies in the RPA domain, we will create new value that contributes to resolving issues faced by client companies and society.

About UiPath

UiPath is the world's leading RPA vendor, providing integrated software platforms for the efficient automation of client company business processes. Headquartered in the United States, UiPath also has offices in Japan, England, Romania, France, Germany, India, Singapore, Hong Kong and Australia. UiPath is used by 660 global companies (65% of which represent more than US\$10 billion in sales) and has more than 150 partner companies throughout the world. <https://www.uipath.com/ja>
